

Tattoo Removal Pricing

\$75 - \$100 per square inch

OR

\$300 flat fee

In addition to the square inch pricing, some doctors will charge a minimum fee \$100-150 or an initial fee of \$150 to turn on the laser. Many practitioners will charge \$75 per square inch or pricing that suits your particular market. If you would rather generate a flat fee per patient, the market price is around \$300 per patient. The average size of a tattoo is 2-4 square inches so you can see how this pricing is obtained.

Each tattoo pigment (such as black, blue, red or green) absorbs a specific wavelength of light. Dark ink usually responds quicker than bright ink because they absorb light better. We use the Q-switched YAG (1064/532/585/650) for tattoo removal.

The number of treatments that laser tattoo removal requires varies depending on the tattoo. Several variables come into play such as the type of ink used, how deep the ink was injected, and the location of the tattoo. Removing a professionally applied tattoo requires 8-15 laser tattoo removal treatments spaced out 4-8 weeks apart. Most amateur or "street tattoos" can be removed with as little as 6-12 laser tattoo removal treatments scheduled 4-8 weeks apart. You may discover that some tattoos will be much lighter after only the first few treatments.

Tattoo Clearance Table	
Tattoo Type	Number of Treatments
Professional	6-15
Amateur	2-6
Cosmetic	1-4
Traumatic	2-6
Medical	2-6
